

# Tracks after Medical school in Egypt

George Hanen, MBBCh candidate  
AAN member.

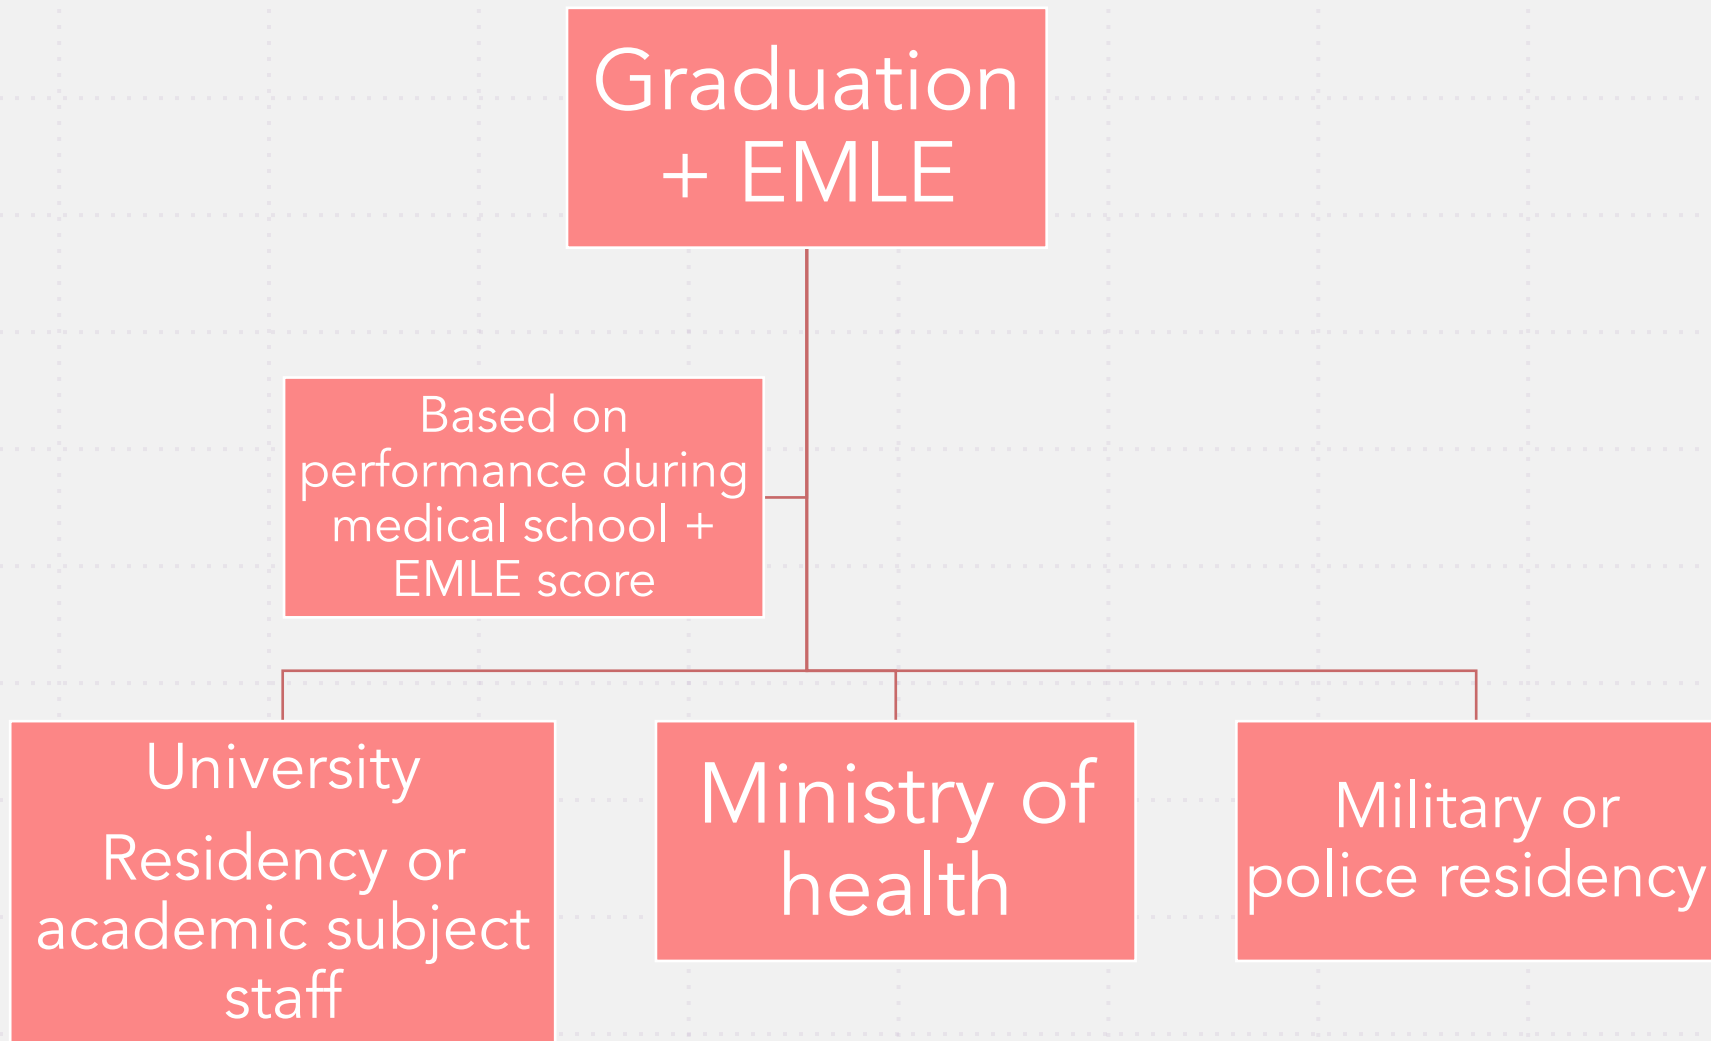

Medical School =

5 years of medical education + 2 year of internship

5 years of medical education =

2.5 years of basic medical discipline + 2.5 years of clinical rotations

note: some schools have different system of (2 years of basic science + 3 years of clinical rotations) or (3 years of basic science + 2 years of clinical rotations).

You can also choose to be a general practitioner without pursuing graduate medical education. However, it is rare nowadays.
